

Project #1 - The Clickbait Generator

Create a program that will generate a random number of clickbait headlines from existing lists of:

- 1) nouns (ie. 'Athlete','Clown','Shovel','Robot')
- 2) places (ie. 'house','attic','school','basement')
- 3) provinces (ie. 'Ontario','BC','Alberta','Nova Scotia')
- 4) when (ie. 'later this year','soon','later today','right now')
- 5) object pronouns (ie. 'her','him','them')
- 6) possessive pronouns (ie. 'hers','his','theirs')
- 7) personal pronouns ('She','he','they')

Have a random generator that selects from a 5 choice of preset sentences that can use the lists to import. Each sentence preset should be its own function (the random generator will select which preset).
